Intro to Pond Care in the Southeast

Ponds in the Southeast are shaped by warmth, humidity, and long growing seasons. These conditions make ponds especially prone to algae growth, cloudy water, and mosquito problems. Fish often face oxygen stress during hot summer nights when oxygen levels dip, and without circulation, stagnant water can quickly become unbalanced.

Pond care in the Southeast focuses on maintaining oxygen levels, controlling algae naturally, and keeping water moving to discourage mosquitoes. Because pond ecosystems here remain active for most of the year, management is not just seasonal—it's ongoing. With proper aeration, circulation, and attention to nutrient balance, Southeast ponds can remain healthy, clear, and beautiful despite the challenges of a humid climate.

Southeastern Pond Challenges

Algae & Weed Overgrowth

- Warm temperatures and long growing seasons feed constant growth.
- Algae mats and invasive weeds thrive in nutrient-rich ponds.

Low Oxygen Levels

- Hot, humid nights cause oxygen crashes.
- Fish kills are especially common in summer.

Mosquito Breeding

- Stagnant water becomes a breeding ground.
- Standing water also contributes to foul odors

Year-Round Pond Stress

- Ponds rarely “rest” due to mild winters.
- Continuous care is needed to maintain balance.

How Solar Aerators Help

Customer: Malcolm P., Bayou Bend Catfish-Mississippi

System Purchased: 2x -RPS AIR400 Solar Aerator

Goals: The farm's 1/2-acre catfish ponds struggled with oxygen crashes in hot, humid summers, leading to costly fish kills. They needed a reliable, off-grid aeration system to keep fish alive and healthy.

Results:

“Since adding the aerators, we haven’t lost a single pond of fish. The oxygen levels stay steady, even in August heat. It paid for itself the first season.”

Working with RPS:

“The folks at RPS were just plain friendly and easy to work with. Any time something came up, they didn’t leave us hangin’—they walked us through it ‘til we had it fixed. You can tell they truly care about their customers, and that means a lot out here.”

**“We love it! It paid for itself
the first season”**

How Solar Fountains Help

Customer: Jessica R., Magnolia Hill Farm, Georgia

System Purchased: RPS F800 Solar Fountain Kit

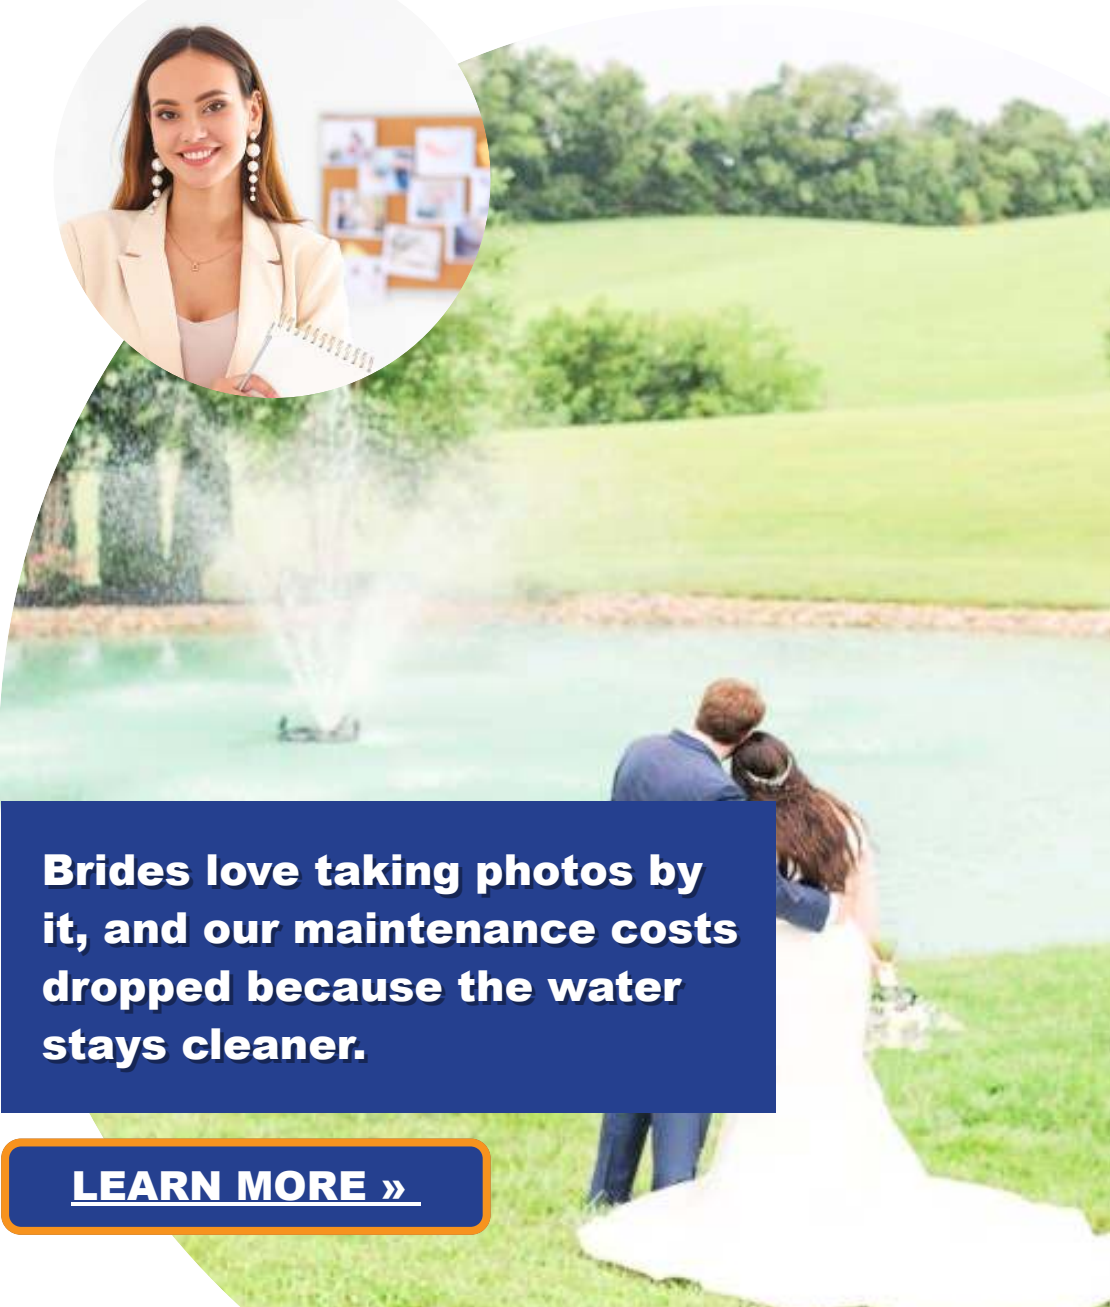

Goals: Jessica runs a wedding and event venue and wanted their pond to look stunning for guests while cutting down on algae that ruined photos.

Results:

“The fountain transformed the property. Brides love taking photos by it, and our maintenance costs dropped because the water stays cleaner. It’s become a photo opp for our venue.”

Working with RPS:

“Ordering was simple, and they helped us pick the right size fountain for the spray height we wanted. The customer service really made it easy.”

Brides love taking photos by it, and our maintenance costs dropped because the water stays cleaner.

RPS FOUNTAIN KITS

High-output solar fountains that aerate while adding beauty.

- Models: F200, F400, F800, F1600, F2200, F3000
- Kit Includes: Solar panels, DC disconnect, stainless steel pump, floating ring, intake filter, fountain nozzles, safety rope, solar wire
- Best For: Decorative ponds, community or HOA features, livestock ponds needing circulation

Benefits For Fish and Wildlife

Wildlife also benefits from aeration! Birds, frogs, and even pollinators rely on clean, circulating water. Moving water reduces mosquitoes and keeps ponds safe for critters to drink, feed, and play without hazards.

Southwestern wildlife that depend on ponds:

- White-tailed Deer – Frequent visitors to drink from ponds.
- American Alligator – Relies on healthy water habitats across the South.
- Bullfrogs – Thrive in balanced pond ecosystems.
- River Otters – Hunt fish and amphibians in ponds with good oxygen levels.
- Great Blue Heron – Feed on fish, frogs, and other aquatic life supported by a balanced pond.

And the best part? Because solar systems run off the sun, even remote ranch ponds can stay healthy all year—no chemicals, no wiring, just sustainable, worry-free care for your fish and wildlife.

5-Star Reviews From Your Neighbors

Across the country, pond owners are transforming their water with RPS Solar Aerators and Fountains. From ranch ponds to community lakes, our customers are seeing clearer water, healthier fish, and reduced algae—all powered by the sun. Here's what they have to say in your region:

"Summers here are brutal, and we lost fish two years in a row. Our aerator runs daily and keeps the oxygen levels stable. No more algae mats covering the pond and no more fish kills." - **Kevin, FL**

"Our members wanted something beautiful for the clubhouse pond. We chose an **F3000 Tripower**, and it's been fantastic. It keeps mosquitoes down, adds oxygen, and the fountain spray is gorgeous at sunset." - **Horace, SC**

"Mosquitoes used to be awful around our water trough pond. With the **AIR200** moving water, the mosquito problem is nearly gone and the horses always have clean water." - **Janet, GA**
